## Decimal / denary numbers recap

S.P.I.R.I.T
$\checkmark$ Self-management $\checkmark$ Perseverance

## How many digits are in our number system?

To develop knowledge by exploring the denary and binary number system

To secure understanding by converting between both number systems

## How does our number system work?

## What is the following number?

To develop knowledge by exploring the denary and binary number system

Exactly...Its fourteen
Without really thinking you did the following...

Number placements go up in tens

## Computers can only recognise 2 numbers:

> | To develop knowledge by |
| :--- |
| exploring the denary and |
| binary number system |

## 1 and 0

These are called Binary numbers

## Computers have switches not fingers!

There are millions of tiny switches inside a computer. Switches can only ever be ON or OFF

$1=$ switch turned on
$0=$ switch being off

## So the binar

S.P.I.R.I.T

To develop knowledge by exploring the denary and binary number system

To secure understanding by converting between both number systems

In base ten (denary) we wrote the place numbers 1, 10 and 100 above the number.

In base 2 (binary) we have to write...

What do you notice about the numbers above the binary?
Do they go up in tens this time?
They double each time

In binary, we only count the places with a 1 underneath them (switched on)
Like with denary we then do the calculation...

| $1 \times 8$ | $=8$ |
| :--- | :--- |
| $1 \times 4$ | $=4$ |
| $1 \times 2$ | $=\underline{2}$ |

## Let's do some together:) write this one in your book and have a go

## Let's do another one ©

To achieve excellence by

## QUIZ

1. Who or what can use and understand the decimal number system?
2. How many digits are in the binary number system?
3. What are the digits in the decimal number system?
4. Who/what uses binary numbers
5. Which binary number is the biggest?

00110101 or 00110100
6. What do the numbers 1 and 0 represent inside a computer?

## To develop knowledge by exploring the denary and binary number system <br> To secure understanding <br> by converting between both number systems

To achieve excellence by converting between 8 bit binary numbers
